

Intro

This mod adds several meshes inside the body via a crotch accessory to fake a x-ray view of the womb with animated fluid.

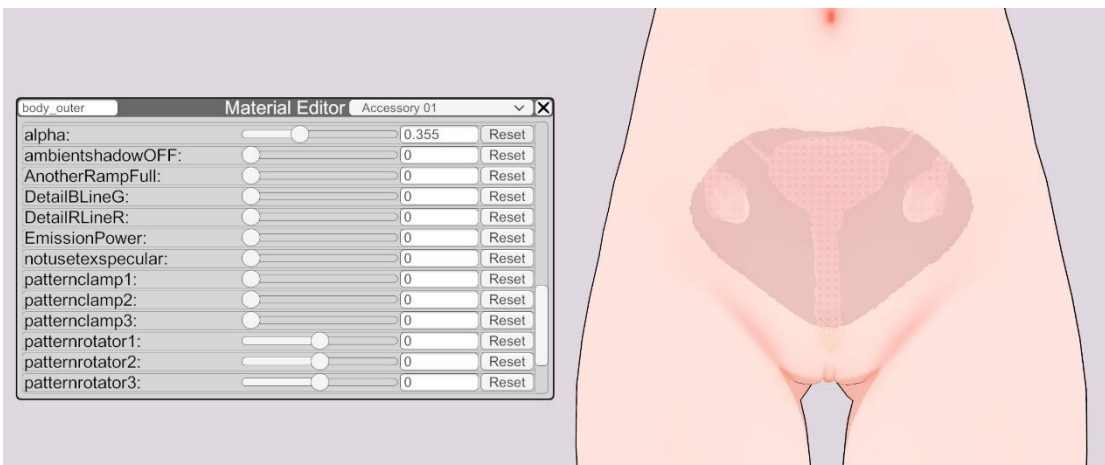

Setup

1. Place the “Liquid_shader_wobble.dll” into the bepinex > plugins folder or else the fluid will not be animated from movements.
2. Place “[GF]Liquid Shader v1.0.zipmod” into your mods folder (or Sideload Modpack - KK_MaterialEditor). This adds the ability to adjust the liquid shader properties with Material Editor. It won't work if applied on other meshes (read further below if you are a modder and want to add this effect to your mod).
3. Place “[GF]Xray Womb v1.0.zipmod” into your mods folder (or Sideload Modpack)

Adjustments

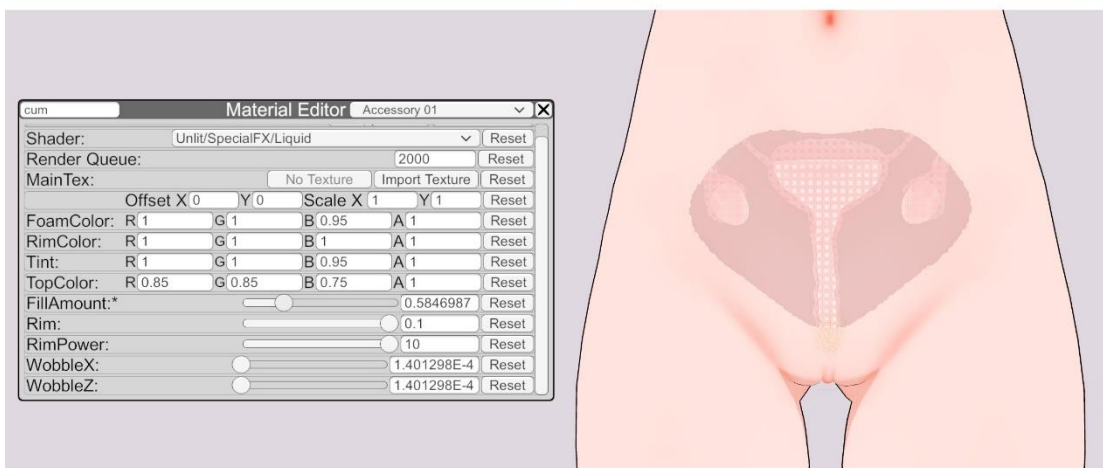

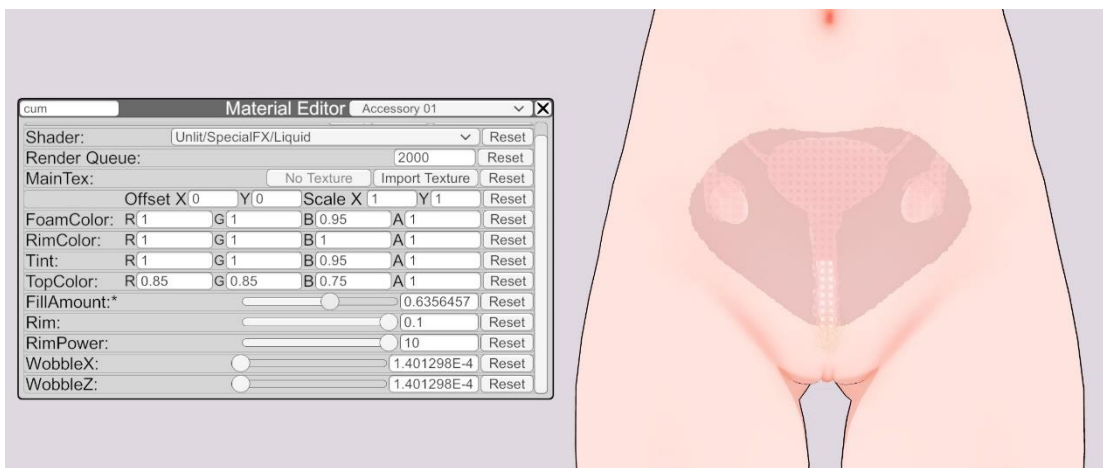

Open Material Editor and search for “body_outer”.

Use the Alpha slider to control the window size.

You can also use studio objects like the circular shadow by setting its shader to “main_studio_alpha” and Render Queue to 2100

Search for the “cum” material and adjust the FillAmount

Use advanced KKPE in studio and look for “o_uterus” to adjust the various blendshapes

For modders

Copy the “Unlit/Special/Liquid” shader and “Wobble” MonoBehaviour with SB3UGS into your own asset bundle and assign them to the mesh you want to turn into animated fluid. If your mesh consists of multiple sub-meshes the liquid material needs to be on the very top.
