

# **How to deactivate a MAP-Light to avoid shadow issues with false lighting direction.**

By Rush, 24.07.2021

The method in this document describes the process for only one map, the map lights of modded maps may have different names but the core functionality should be the same.

Summary:

Step 1: Load a Map.

Step 2: Load a D-MODMAP Light.

Step 3: Turn the D-MODMAP Light. You have now too many shadows, one from the map, one for the D-MODMAP.

Step 4: Open Scene Browser F6.

Step 5: Open Scene Browser F6, search for “Sunlight”, deactivate it.

Step 6 You have now only the D-MODMAP shadows that you can rotate at will, or even deactivate.

## Step 1: Load a Map.

## Step 2: Load a D-MODMAP Light.

Step 3: Turn the D-MODMAP Light. You have now too many shadows, one from the map, one for the D-MODMAP.

## Step 4: Open Scene Browser F6.

Step 5: Open Scene Browser F6, search for “Sunlight”, deactivate it.

Step 6 You have now only the D-MODMAP shadows that you can rotate at will, or even deactivate.
